Raji cells were mixed with human PBMCs, and different doses of Rituximab was added to induce ADCC, the killing of raji cells were detected through FACS(CFSE labeling of raji).

Raji cells were mixed with human AB serum, and different doses of Rituximab was added to induce CDC, the killing of raji cells were detected through FACS(PI staining of raji).

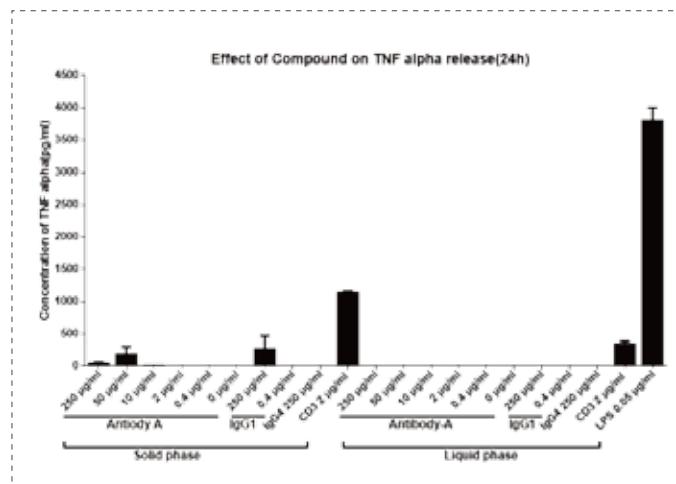

B cells were treated with Telitacicept and induced with Baff for 72 hours, H3-thymidine incorporation were analyzed through scintillation counting.

T cells were treated with compound A and induced with ICOSL for 72 hours, H3-thymidine incorporation were analyzed through scintillation counting.

: CD3+ Bispecific Antibody

- **Animals:**
 Female NOG mice
- **Tumor Cells:**
 Tumor mixed hPBMC (1:1) with 50% Matrigel, SC
- **PBMC:**
 injected before tumor cells inoculation
- **Treatment:**
 Bispecific antibody
